1. COURSE INFORMATION

During one year duration of "Radiology Technician" trade, a candidate is trained on Professional Skill, Professional Knowledge and Employability Skill related to job role. In addition to this, a candidate is entrusted to undertake project work, extracurricular activities and industrial visitto build up confidence. The broad components covered under Professional Skill subject are as below:-

FIRST YEAR: During this year, the trainee will be able to understand Atomic and nuclear Physics, Electromagnetic radiation and the production of x-ray, construction of modern x-ray tubes and interactions of x-ray with the matter. Identify the x-ray circuit and units, operate the console panel, radiographic grid and beam restricting devices. He will practice radiation protection and operate radiation measuring devices and understand radiotherapy.

The candidate will be able to assemble general & radiographic anatomy, bones, joints and body systems using mannequins and skeleton. He will execute the radiographic and darkroom techniques, perform the radiographic film processing. The trainee will understand the radiographic contrast media and perform the radiographic positioning and special procedures.

SECOND YEAR: In this year, the trainee will be able to analyze CT patient positioning, manipulate parameters associated with exposure and processing to produce a required image of desired quality and also operate MRI scan and perform patient positioning, review protocols for MRI scanning. They will analyze USG scan patient positioning, preparation, techniques general care and also analyze working of CR, DR and fluoroscopy system manipulate parameters associated with exposure and processing to produce a required image of desired quality. The trainee will interpret the factors, tools and techniques affecting the radiographic image quality. They will illustrate the general patient care in handling and preparation of patients during radiological examination.

The trainee will be able to select and plan the radiographic calibration and tube rating charts. They will perform and understand emergency conditions and their remedy in medical emergency conditions. Also operation of radiotherapy units and understand basic of human radiobiology, effects of radiation protection in radiotherapy.

2.1 GENERAL

The Directorate General of Training (DGT) under Ministry of Skill Development & Entrepreneurship offers a range of vocational training courses catering to the need of different sectors of the economy/ Labour market. The vocational training programs are delivered under the aegis of the Directorate General of Training (DGT). Craftsman Training Scheme (CTS) and Apprenticeship Training Scheme (ATS) are two pioneer programsofDGT for propagating vocational training.

'Radiology Technician'trade under CTS is one of the popular courses delivered nationwide through a network of ITIs. The course is of two-year duration. It mainly consists of Domain area and Core area. The Domain area (Trade Theory & Practical) impart professional skills and knowledge, while Core area (Employability Skills) imparts requisite core skill, knowledge and life skills. After passing out of the training program, the trainee is being awarded National Trade Certificate (NTC) by DGT which is recognized worldwide.

Candidatesbroadlyneed to demonstrate that they are able to:

- Read and interpret technical parameters/ documents, plan and organize work processes, identify necessary materials and tools;
- Perform tasks with due consideration to safety rules, accident prevention regulations and environmental protection stipulations;
- Apply professional skill, knowledge & employability skills while performing jobs.
- Perform remedial in medical emergency conditions, undertake radiation protection and operate radiation measuring devices.
- Document the parameters related to the task undertaken.

2.2 PROGRESSION PATHWAYS

- Can join industry as Technician and will progress further as Senior Technician, Supervisor and can rise up to the level of Manager.
- Can become Entrepreneur in the related field.
- Can join Apprenticeship programs in different types of industries leading to a National Apprenticeship certificate (NAC).
- Can join Crafts Instructor Training Scheme (CITS) in the trade for becoming an instructor in ITIs as applicable.
- Can join Advanced Diploma (Vocational) courses under DGT as applicable.

2.3 COURSE STRUCTURE

Table below depicts the distribution of training hours across various course elements during a period of two years :

CNo	Course Flowert	Notional Training Hours		
S No.	Course Element	1 st Year	2 nd Year	
1	Professional Skill (Trade Practical)	840	840	
2	Professional Knowledge (Trade Theory)	240	300	
3	Employability Skills	120	60	
	Total	1200	1200	

Every year 150 hours of mandatory OJT (On the Job Training) at nearby industry, wherever not available then group project is mandatory.

4	On the Job Training (OJT)/ Group Project	150	150
5	Optional Courses (10th/ 12th class certificate along with ITI certification or	240	240
add on short term courses)			

Trainees of one-year or two-year trade can also opt for optional courses of up to 240 hours in each year for 10th/ 12th class certificate along with ITI certification or add on short term courses.

2.4 ASSESSMENT & CERTIFICATION

The trainee will be tested for his skill, knowledge and attitude during the period of course through formative assessment and at the end of the training programme through summative assessment as notified by the DGTfrom time to time.

- a) The Continuous Assessment(Internal) during the period of training will be done by **Formative Assessment Method** by testing for assessment criteria listed against learning outcomes. The training institute has to maintain an individual trainee portfolio as detailed in assessment guideline. The marks of internal assessment will be as per the formative assessment template provided on www.bharatskills.gov.in.
- b) The final assessment will be in the form of summative assessment. The All India Trade Test for awarding NTCwill be conducted by Controller of examinations, DGT as per the guidelines. The pattern and marking structure is being notified by DGT from time to time. **The learning**

outcome and assessment criteria will be the basis for setting question papers for final assessment. The examiner during final examination will also check the individual trainee's profile as detailed in assessment guideline before giving marks for practical examination.

2.4.1 PASS REGULATION

For the purposes of determining the overall result, weightage of 100% is applied for six months and one year duration courses and 50% weightage is applied to each examination for two years courses. The minimum pass percent for Trade Practical and Formative assessment is 60% & for all other subjects is 33%.

2.4.2 ASSESSMENT GUIDELINE

Appropriate arrangements should be made to ensure that there will be no artificial barriers to assessment. The nature of special needs should be taken into account while undertaking the assessment. Due consideration should be given while assessing for teamwork, avoidance/reductionofscrap/wastage and disposal of scrap/waste as per procedure, behavioral attitude, sensitivity to the environment and regularity in training. The sensitivity towards OSHE and self-learning attitude are to be considered while assessing competency.

Assessment will be evidence based comprising some of the following:

- Job carried out in labs/workshop
- Record book/ daily diary
- Answer sheet of assessment
- Viva-voce
- Progress chart
- Attendance and punctuality
- Assignment
- Project work
- Computer based multiple choice question examination
- Practical Examination

Evidences and records of internal (Formative) assessments are to be preserved until forthcoming examination for audit and verification by examining body. The following marking pattern to be adopted for formative assessment:

Performance Level	Evidence			
(a) Marks in the range of 60%-75% to be allotted during assessment				

For performance in this grade, the candidate should produce work which demonstrates attainment of an acceptable standard of craftsmanship with occasional guidance, and due regard for safety procedures and practices

- Demonstration of good skills and accuracy in the field of work/ assignments.
- A fairly good level of neatness and consistency to accomplish job activities.
- Occasional support in completing the task/job.

(b) Marks in the range of 75%-90% to be allotted during assessment

For this grade, a candidate should produce work which demonstrates attainment of a reasonable standard of craftsmanship, with little guidance, and regard for safety procedures and practices

- Good skill levels and accuracy in the field of work/ assignments.
- A good level of neatness and consistency to accomplish job activities.
- Little support in completing the task/ job.

(c) Marks in the range of more tha N90% to be allotted during assessment

For performance in this grade, the candidate, with minimal or no support in organization and execution and with due regard for safety procedures and practices, has produced work which demonstrates attainment of a high standard of craftsmanship.

- High skill levels and accuracy in the field of work/ assignments.
- A high level of neatness and consistency to accomplish job activities.
- Minimal or no support in completing the task/job.

Radiology Technician

Radiology Technician is also referred to as Radiologic technologists, Radiological Technologists and Technicians. Radiology Technicians perform diagnostic imaging examinations such as X-rays, CT and MRI scans under the guidance of a Radiologist. They are responsible for preparing patients and operating equipment for the test, besides keeping patient records and adjusting and maintaining equipment.

X-ray Technician

X-ray Technician; Radiographer; Radiological Assistant takes X-ray skiagraph (Photographs) for diagnosis of ailments or gives ray treatment by operating X-ray equipment and exposing patients to the rays. Prepares or gets patients prepared by Nurse for ray exposure. Regulates duration and intensity of exposure by adjusting machines and exposing patients to rays as directed by the Radiologist. Positions patient on the X-ray couch to ensure correct exposure of the part of the body required to be X-rayed and for ray exposure taking care to protect the patient and themselves from harmful exposure to X-ray. Adjusts X-ray tube at a proper distance and angle, by rotating the pivot, etc. to ensure centering of tube on part of the body to be X-rayed. Regulates controls of X-ray machine or therapy equipment, for duration, intensity of exposure and exposes film or patient to rays as directed by the Radiologist. Removes cassette with exposed film and hands over to Dark Room Assistant where available for developing fixing, washing, Labelling (date and name of patient) etc. Mixes, develops, fixes etc. and processes X-ray films in accordance with techniques and instruction of Radiologist. Keeps records of raw and exposed films, spare parts and of patients X-rayed or treated. May mix developers and process film in accordance with prescribed techniques.

4. GENERAL INFORMATION

Name of the Trade	DADIOLOGY TECHNICIAN		
Name of the Trade	RADIOLOGY TECHNICIAN		
Trade Code	DGT/1059		
NCO - 2015	3211.0101, 3211.0100		
NOS Covered	HSS/N9451, HSS/N9452, HSS/N9453, HSS/N9454, HSS/N9455, HSS/N9456, HSS/N9457, HSS/N9458, HSS/N9459, HSS/N9460, HSS/N9461, HSS/N9462, HSS/N9463, HSS/N9464, HSS/N9465, HSS/N9466		
NSQF Level	Level 4		
Duration of Craftsmen Training	Two Years (2400 hours + 300 hours OJT/Group Project)		
Entry Qualification	Passed 10 th class examination		
Minimum Age	14 years as on first day of academic session.		
Eligibility for PwD	Not suitable. Not considered as medical trade		
Unit Strength (No. of Students)	20(There is no separate provision of supernumerary seats)		
Space Norms	75 Sq. m		
Power Norms	4.0 KW		
Instructors Qualification fo	or:		
(i) Radiology Technician	B.Voc/Degree in Radiology Technician/Radiation therapy technician from AICTE/UGCrecognized Engineering College/ university with one-year experience in the relevant field. OR Diploma(Minimum 2 years) in Radiology Technician from AICTE recognized board of technical education or relevant Advanced Diploma (Vocational) from DGT with two years' experience in the relevant field. OR NTC/NAC passed in the Trade of "Radiology Technician" with three-year post qualification experience in the relevant field.		
	Essential Qualification:		

Regular / RPL variants of National Craft Instructor Certif in relevant trade. Note: Out of two Instructors required for the unit of 2 must have Degree/Diploma and other must have qualifications. However both of them must possess NC			
	its variants.		
(ii) Employability Skill	MBA/ BBA / Any Graduate/ Diploma in any discipline with Two years' experience with short term ToT Course in Employability Skills. (Must have studied English/ Communication Skills and Basic Computer at 12th / Diploma level and above) OR Existing Social Studies Instructors in ITIs withshort term ToT Course		
	in Employability Skills.		
(iii) Minimum Age for Instructor	21 Years		
List of Tools and Equipment	As per Annexure – I		

Learning outcomes are a reflection of total competencies of a trainee and assessment will be carried out as per the assessment criteria.

5.1 LEARNING OUTCOMES

FIRST YEAR:

- 1. Apply atomic and nuclear physics concept of Rutherford Bohr Model and relate it to Thomson's model of the atom following safety precautions. (NOS: HSS/N9451)
- 2. Demonstrate Electromagnetic radiation, production of x-ray, construction of modern x-ray tube, and Interactions of x-ray with matter. (NOS: HSS/N9452)
- 3. Identify the X-ray circuit and units, radiographic grid and beam restricting devices and operate the console panel. (NOS: HSS/N9453)
- 4. Perform radiation protection and operate radiation measuring devices and understand Radio Therapy. (NOS: HSS/N9454)
- 5. Assemble General &radiographic anatomy, bones, joints and body systems using mannequins and skeletons. (NOS: HSS/N9455)
- 6. Execute the radiographic and darkroom techniques, perform the radiographic film processing. (NOS: HSS/N9456)
- 7. Demonstrate the Radiographic contrast media and perform the radiographic positioning and special procedures. (NOS: HSS/N9457)

SECOND YEAR:

- 8. Analyze CT patient positioning, manipulate parameters associated with exposure and processing to produce a required image of desired quality. (NOS: HSS/N9458)
- Operate MRI scan and perform patient positioning, review protocols for MRI scanning. (NOS: HSS/N9459)
- 10. Analyze USG scans patient positioning, preparation, techniques, general care. (NOS: HSS/N9460)
- 11. Analyze working of CR, DR and fluoroscopy system manipulate parameters associated with exposure and processing to produce a required image of desired quality. (NOS: HSS/N9461)
- 12. Interpret the factors, tools and techniques affecting the radiographic image quality. (NOS: HSS/N9462)
- 13. Illustrate the general patient care in handling and preparation of patients during radiological examination. (NOS: HSS/N9463)

- 14. Select and plan the radiographic calibration and Tube rating charts. (NOS: HSS/N9464)
- 15. Analyze the emergency conditions and demonstrate their remedy. (NOS: HSS/N9465)
- 16. AnalyzeOperation of radiotherapy units and understand the basics of Humanradiobiology, effects of radiation, protection in radiotherapy. (NOS: HSS/N9466)

LEARNING OUTCOMES		ASSESSMENT CRITERIA		
		FIRST YEAR		
1.	Apply atomic and	Identify the basic structure of atom and nuclei.		
	nuclear physics	Perform a presentation on atom.		
	concept of Rutherford	Determine the half-life& decay constant for various radioactive		
	Bohr Model and relate	materials.		
	it to Thomson's model	Differentiate between the properties of alpha, beta, gamma particles		
	of the atom following	and fusion &fission.		
	safety precautions.			
	(NOS: HSS/N9451)			
2.	Demonstrate	Identify the type of radiation based on the Order of wavelengths,		
	Electromagnetic	frequencies, amplitude and energy.		
	radiation, production	Determine the properties and production of x-rays.		
	of x-ray, construction	Recognize the parts of x-ray tube and their functions.		
	of modern x-ray tube, and Interactions of x-	Identify the types of interaction of x-ray with matter and their		
	ray with matter. (NOS:	probability of occurrence.		
	HSS/N9452)			
	1.00,113.102,			
3.	Identify the X-ray	Identify the parts of x-ray circuit and unit.		
	circuit and units,	Operate the parts of the control panel.		
	radiographic grid and	Measure the major parameters responsible for the production of x-		
	beam restricting	ray.		
	devices and operate	Identify and use the beam restricting devices.		
	the console panel.	Check and perform the use of grid devices.		
	(NOS: HSS/N9453)	Select and choose the grid & the Bucky factor.		
4.	Perform radiation	Understand the public & occupational radiation protection.		
	protection and	Identify the radiation protection equipments.		
	operate radiation	Measure the dose levels by using dissymmetric instruments.		
	measuring devices and	Check and calculate the accuracy of different radiation safety		
	understand Radio	equipments.		
	Therapy.	Compute the dose measurement and dose limits.		
	(NOS: HSS/N9454)	Identify the type of therapy.		
		Identify the various types of machines used in radiotherapy.		

5.	Assemble General	Identify the bones, joints, muscles and their types.		
&radiographic anatomy, bones, joints and body systems		Analyze the body positions, planes and movements.		
		Identify the different body organs and cavities. Perform the general radiographic positioning.		
	skeletons.			
	(NOS: HSS/N9455)			
6.	Execute the	Identify the types of x-ray film, screen and cassettes.		
	radiographic and	Prepare the x-ray film processing chemicals.		
	darkroom techniques,	Perform the use of x-ray film, screen and cassettes.		
	perform the	Execute the handling and storage of radiographic film, screen and		
	radiographic film	cassettes.		
	processing.			
	(NOS: HSS/N9456)			
7.	Demonstrate the	Identify the difference between ionic and non-ionic contrast media.		
	Radiographic	Perform and select the contrast for appropriate examination and care		
	contrast media and	during contrast injection.		
	perform the	Perform the routine radiographic positioning.		
radiographic positioning and special		Select the correct radiographic technical factors and analyze the x-ray		
		film for image quality.		
	procedures.	Perform the radiographic positioning of special patients.		
	(NOS: HSS/N9457)	Perform the radiographic procedures with appropriate techniques,		
		patient care and handling.		
		Read & analyze the specification to ascertain the material		
		requirement, tools and assembly/maintenance parameters.		
		Encounter drawings with missing/unspecified key information and		
		make own calculations to fill in missing dimension/parameters to		
		carry out the work.		
		SECOND YEAR		
8.	Analyze CT patient	Perform the patient positioning correctly for a CT scan.		
	positioning,	Illustrate the use of contrast medium in CT.		
	manipulate parameters	Operate CT console for selection of suitable technical factors and		
	associated with	protocols.		
exposure and processing to produce		Illustrate the radiographic appearance of both normal and abnormal		
	a required image of	conditions.		
	,	1		

	desired quality. (NOS: HSS/N9458)	
9.	Operate MRI scan and perform patient positioning, review protocols for MRI scanning. (NOS: HSS/N9459) Analyze USG scan patient positioning,Preparatio n, techniques, general care. (NOS: HSS/N9460)	Perform the patient positioning correctly for MRI scan. Identify the use of contrast medium in MRI scan. Operate MRI console for selection of suitable technical factors and protocols. Illustrate the radiographic appearance of both normal and abnormal conditions. Plan general safety rules in MRI practice. Understand the USG techniques. Illustrate the use of contrast medium in USG. Performthe patient positioning and preparation correctly for USG scan. Understand the USG Doppler techniques.
11.	Analyze working of CR, DR and fluoroscopy system manipulate parameters associated with exposure and processing to produce a required image of desired quality. (NOS: HSS/N9461)	Operate CR, DR and Fluoroscopy system. Illustrate the difference between the working of CR, DR and Fluoroscopy system. Compare the technical factors in the operation of different digital modalities. Analyze the scanned images to determine image quality and clarity. Care and maintenance of CR, DR and Fluoroscopy system.
12.	Interpret the factors, tools and techniques affecting the radiographic image quality. (NOS: HSS/N9462)	Understand radiographic quality, resolution, noise and speed. Differentiate between the geometric factors affecting radiographic quality. Analyze the subject factors affecting radiographic quality. Analyze the tool and technique available to create high quality films.
13.	Illustrate the general patient care in handling and	Execute and schedule patient-load based on emergency or appointment priority. Perform documentation required for medical history, procedures.

	preparation of	Understand how to manage a patient with contrast media.
	patients during	Understand care and handling of patients in special cases.
	radiological	
	examination.	
	(NOS: HSS/N9463)	
14.	Select and plan the	Understand and sketch tube rating charts.
	radiographic	Assess application of tube rating charts in radiology.
	calibration and tube	Illustrate the radiographic calibration.
	rating charts.	
	(NOS: HSS/N9464)	
15.	Analyzetheemergency	Plan and perform the first aid in required conditions.
	conditions and	Perform & operate the BP machine.
	demonstrate their	Calculate & analyzes the heart rate.
	remedy.	Select & perform the techniques of Bandage & dressings.
(NOS: HSS/N9465)		Plan & perform the energy treatment, according to the conditions.
16.	AnalyzeOperation of	Identify the types of biological effects.
	radiotherapy units and	Identify the different types of radiotherapy units.
	understand basic of	Operate the radiotherapy units.
	human radiobiology,	Execute planning set up for radiotherapy examination.
	effects of radiation,	Perform shielding methods for radiotherapy.
	protection in	Understand working and construction of LINAC.
	radiotherapy.	Calculate relative biological effectiveness and LET.
	(NOS: HSS/N9466)	Execute the treatment planning.
		Read & analyze the specification to ascertain the material
		requirement, tools and assembly/maintenance parameters.
		Encounter drawings with missing/unspecified key information and
		make own calculations to fill in missing dimension/parameters to
		carry out the work.

 Intraluminal. Different
 Dosage systems. Sources
 used in Branchy therapy.
 Radiographic verifications.
 Superficial beta-ray
 applications. Mould room
 procedures, construction of
 moulds.

Project work/ Hospital visit

Broad Areas:

- a) Tube rating charts and radiographic calibration
- b) Blood Pressure measurement
- c) CT simulation planning
- d) Cell survival curves and radiation exposure
- e) Pocket dosimeter
- f) Calibration of instruments

SYLLABUS FOR CORE SKILLS

1. Employability Skills (Common for all trades)(120Hrs. + 60 Hrs.)

Learning outcomes, assessment criteria, syllabus and Tool List of Core Skills subjects which is common for a group of trades, provided separately inwww.bharatskills.gov.in / dgt.gov.in

	List of Tools &Equipment					
RADIOLOGY TECHNICIAN (For batch of 20 Candidates)						
S No.	Name of the Tools and Equipments	Specification	Quantity			
1.	Model/ Diagram of i) Van de Graff Generator ii) Linear accelerator iii) Betatron iv) Cyclotron v) Geiger Muller Counter vi) Scintillation Counter vii) Safety precaution chart viii) Human Organs ix) Telecobalt Unit		1 no.			
2.	Pocket Dosimeter		20 nos.			
3.	TLD Badges		20 nos.			
4.	Continuation monitor		2 nos.			
5.	X-ray Unit	500 MA, 80 KVP	1 no.			
6.	Darkrooms facility		1 no.			
7.	G.M B. V counting set up		1 no.			
8.	Gamma Survey meter	Range 0-20m R/hr or 0-100 mR/hr	1 no.			
9.	Jacket and Shoes		20 nos.			
10.	Fire Extinguisher		1 no.			
11.	Lead Bricks		12 nos.			

NOTE:

1. Internet facility is desired to be provided in the class room.

The DGT sincerely acknowledges contributions of the Industries, StateDirectorates, Trade Experts, Domain Expertsand all others who contributed in revising the curriculum.

Special acknowledgement is extended by DGT to the following expert members who had contributed immensely in this curriculum.

List of Expert Members participated for finalizing the course curriculum of Radiology Technician held on 18.05.2017 at NIT Centre, New Delhi				
S No.	Name & Designation Sh/Mr/Ms.	Organization	Remarks
